DOE and Israel Announce \$3.3 Million in Cooperative Clean Energy Projects

November 24, 2009

The U.S. Department of Energy (DOE) today announced a milestone in U.S.-Israel cooperation on clean energy technology. With financial support of DOE and the Israeli Ministry of National Infrastructures, the bilateral BIRD Foundation Energy Executive Committee has competitively selected four cooperative clean energy projects in the United States and Israel. This initiative will award up to \$3.3 million in U.S.-Israel funding for these four projects.

The four projects selected for award help address critical shared bilateral energy-related goals, while focusing on commercializing DOE technologies. The BIRD Foundation will assist by attracting and incorporating private sector cost-sharing.

The four projects will leverage private sector cost-share for a total project value of \$11.6 million:

- **HelioFocus Ltd., Ness Ziona, Israel and Capstone Turbine Corporation, Chatsworth, California** have been selected for an award of up to \$800,000. HelioFocus and Capstone Turbine Corporation will develop and commercialize a micro-turbine to produce electric power from concentrated solar energy. This project includes \$2.1 million in private sector cost-share.
- **Motorola Israel Ltd., Tel Aviv, Israel and SmartSynch, Inc., Jackson, Mississippi** have been selected for an award of up to \$900,000. Motorola Israel and SmartSynch will collaborate in the development and commercialization of a platform to enable implementation of a Smart Grid energy management system. This project will integrate Home Area Network and Smart Grid network management software applications to give utilities greater control while allowing end-users the ability to monitor and control consumption. This project includes \$2.8 million in private sector cost-share.
- **Tigo Energy, Kfar Saba, Israel and U.S. Architectural Glass and Aluminum Co., Inc., Alameda, California** have been selected for an award of up to \$900,000. This project will support the development and integration of a complete Building Integrated Photovoltaic (BIPV) system. The partnership will seek to overcome the cost, standardization, generation performance, visibility, and safety challenges that currently hinder large scale adoption of BIPV. This project includes \$2.3 million in private sector cost-share.
- **TransBiodiesel Ltd., Shfar-Am, Israel and The PuroLite Company, Bala Cynwyd, Pennsylvania** have been selected for an award of up to \$700,000. This project seeks to design a biocatalyst comprised of methanol-resistant lipase immobilized on a cost-effective resin for the production of biodiesel at commercial scales. Lipase biocatalysts offer significant advantages over traditional catalysts used for biodiesel production including lifecycle efficiency gains and consistent product quality, but are currently high-cost and suffer from short operation life-time as they are degraded during the biodiesel production process. This project includes \$1.2 million in private sector cost-share.

The projects are expected to begin in 2010.

About the U.S. Department of Energy/Office of Energy Efficiency and Renewable Energy (www.eere.energy.gov)

The Office of Energy Efficiency and Renewable Energy (EERE) works to strengthen the United States' energy security, environmental quality, and economic vitality in public-private partnerships. It supports this goal through enhancing energy efficiency and productivity; bringing clean, reliable, and affordable energy technologies to the marketplace; and making a difference in the everyday lives of Americans by enhancing their energy choices and their quality of life.
